
USB connection between PC and Flex Full

Posted by paolo.gai - 2008/03/10 09:19

Dear All,

we just released an application note on how to connect the FLEX Full to a PC using USB, providing a software example for both the dsPIC and the PIC18 on the board...

This is just the start, the next steps will be the integration of the SPI primitives in ERIKA and then the Scilab/Scicos support!

bye

PJ
