## Scicos does not produce the Makefile.

The problem is due to the expired license for the Microchip C30 compiler. You can solve the problem changing in the file `compile.sh` under your Scilab path (i.e. `scilab-4.1.2\contrib\dspic\`) and substitute at line 12:

```
cat conf_scicos.oil | ${EE_INSTALLDIR}/pic30/pic30-elf/bin/pic30-elf-gcc -c - -E -P > conf.oil
```

with this new line:

```
cat conf_scicos.oil | gcc -c - -E -P > conf.oil
```

In this way the gcc preprocessor is called instead of the `pic30-elf-gcc`.
